Proposed Solution

Date	**29-09-2026**
Project Name	**Medical Diagnosis Center by Service Portal in ServiceNow**
Maximum Marks	**2 Marks**

Proposed Solution

The proposed solution is a Medical Diagnosis Center by Service Portal in ServiceNow designed to simplify and automate the process of submitting, processing, managing, and tracking medical diagnostic test requests.

The system provides a self-service Service Portal where users can submit diagnostic test requests using structured forms. After submission, the request is processed through an automated Flow Designer workflow that captures the required variables, creates the diagnostic request record, applies workflow logic, sends notifications, and updates the request record.

Key Components

- **Service Portal: Provides a user-friendly interface for accessing and submitting medical diagnostic test requests.**
- **Service Catalog: Provides the Medical Diagnostic Test Center catalog item through which users can request diagnostic tests.**
- **Catalog Variables: Capture details such as patient name, contact information, diagnostic test type, preferred date, and other relevant test information.**
- **Catalog UI Policies: Dynamically display or hide fields based on the user's selections.**
- **Flow Designer: Automates the diagnostic request-processing workflow.**
- **Diagnostic Request Records: Store submitted diagnostic test information and track the request throughout its lifecycle.**
- **Notifications: Keep users and relevant staff informed about request submission, processing, and status updates.**
- **Reporting & Dashboard: Provides visibility into diagnostic requests, their status, and overall request activity.**

Proposed Solution Flow

User submits diagnostic test request → Patient & test details captured → Diagnostic request record created → Request processed → Notification sent → Record updated → Request completed

The solution aims to provide simpler request submission, faster processing, reduced manual effort, improved transparency, and better management of medical diagnostic requests

---

Problem–Solution Overview

Section	Description
1. Problem Statement	Manual medical diagnostic request processing can cause delays, repetitive data entry, communication gaps, and limited visibility into request status.
2. Idea / Solution	A ServiceNow-based Medical Diagnosis Center that provides a Service Portal for diagnostic test submission and automates record creation, request processing, notifications, and status updates.
3. Novelty / Uniqueness	Combines Service Portal, Service Catalog, dynamic forms, Catalog UI Policies, Flow Designer, automated notifications, diagnostic records, and request tracking in one integrated solution.
4. Social Impact / Customer Satisfaction	Provides a simpler way to submit diagnostic requests, improves transparency, provides timely updates, reduces repetitive administrative work, and creates a more organized requestmanagement experience.
5. Business Model	ServiceNow-based healthcare service-management and automation solution; value is primarily generated through reduced manual processing, improved operational efficiency, and better request management.
6. Scalability	The solution can be extended with additional diagnostic tests, catalog items, workflows, notifications, reports, dashboards, and integrations with other healthcare or laboratory systems.

Overall Solution Summary

The Medical Diagnosis Center by Service Portal transforms a manual diagnostic-request process into a structured ServiceNow workflow. By bringing request submission,

information capture, record creation, processing, notifications, and status tracking into one platform, the solution creates a more organized and transparent experience for users and staff.
