Ideation Phase – Empathize & Discover

ThisEmpathy Mapidentifies the needs, expectations, frustrations, and behaviors of users involved in medical diagnostic services. It is based on the project's identified challenges such as manual patient registration, difficulty in requesting diagnostic tests, delays in test processing, lack of request visibility, difficulty accessing laboratory reports, and repetitive administrative work.

Use the generated map above directly in your documentation.

Key Insight:

Users need a simple, transparent, and accessible way to request diagnostic tests, provide patient information, track test progress, and access laboratory reports , while medical and administrative staff need centralized records and reduced manual effort.
This leads to the proposed Medical Diagnosis Center by Service Portal (ServiceNow), which provides a centralized platform for managing diagnostic test requests, patient information, laboratory reports, and related processes.
